# An exchange that pays off.

Mercedes-Benz Genuine Remanufactured Parts.

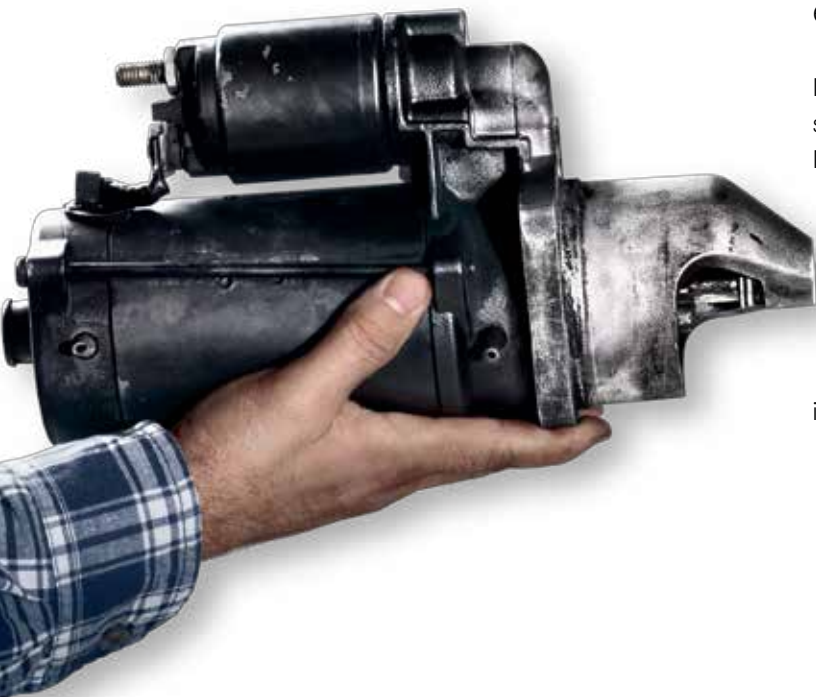

Mercedes-Benz

# Make an exchange...

An exchange that saves up to 50% when an eligible old part is returned.

Mercedes-Benz Genuine Remanufactured Parts offer you sustainable, cost-effective and time-valued repair of your Mercedes-Benz. Every used part that we remanufacture saves the cost of producing a new part – a price advantage that we pass on to you directly.

The quality of a Genuine Remanufactured Part equals the quality of a new Genuine Part and comes with the same factory warranty. We take care of removal and installation for you if you wish. On the spot, of course.

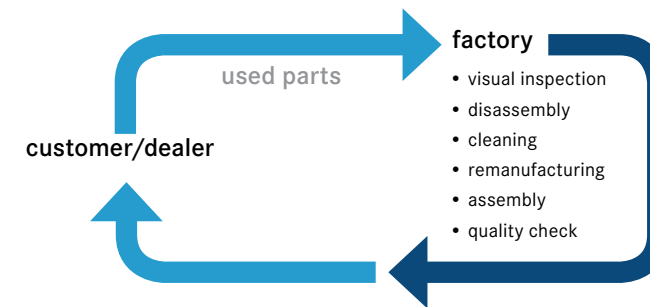

# and drive more efficiently.

Mercedes-Benz Genuine Remanufactured Parts are available in many product categories. Expressed in simple terms, these product groups can be divided into the following four product categories:

- Mechanical components
- Injection systems
- Electric and electronic parts
- Aggregates (engines and transmissions)

The remanufactured parts cycle:

# Make an exchange...

An exchange with a sure payoff.

Drive cost effectively: pay attention to quality. If repaired using Mercedes-Benz Genuine Remanufactured Parts, your Mercedes-Benz remains what it was before repair – a genuine Mercedes-Benz. An assurance in three respects:

**Quality:** The processing of Mercedes-Benz Genuine Remanufactured Parts is subject to stringent scrutiny and takes place in several steps. From the complete disassembly into individual subassemblies, through the cleaning operation, all the way to the visual inspection, the dimensional check and the testing of the electrics, everything is meticulously examined.

If a part does not meet the specifications, it is reprocessed and repaired to comply. All wearing parts are replaced with new parts. Final testing of all Genuine Remanufactured Parts is governed by the same stringent standards as for new parts.

# without compromise.

**Reliability:** We submit Mercedes-Benz Genuine Remanufactured Parts to the same stringent testing criteria as our series-produced parts. Genuine Remanufactured Parts accordingly match our new parts for function, longevity and performance.

**Warranty:** Since Genuine Remanufactured Parts are in no way inferior to new Genuine Parts in quality and reliability, the same factory warranty as for our series-produced parts applies.

# Make an exchange...

An exchange for various product categories.

To prevent failures from keeping you off the road, we keep the most common Mercedes-Benz Genuine Remanufactured Parts in stock, so we can get you back on the road faster.

If on the rare occasion a part is not in stock, your Mercedes-Benz service partner will see to it that a suitable replacement is obtained as quickly as possible by accessing the entire stock of available Mercedes-Benz Genuine Remanufactured Parts from Germany.

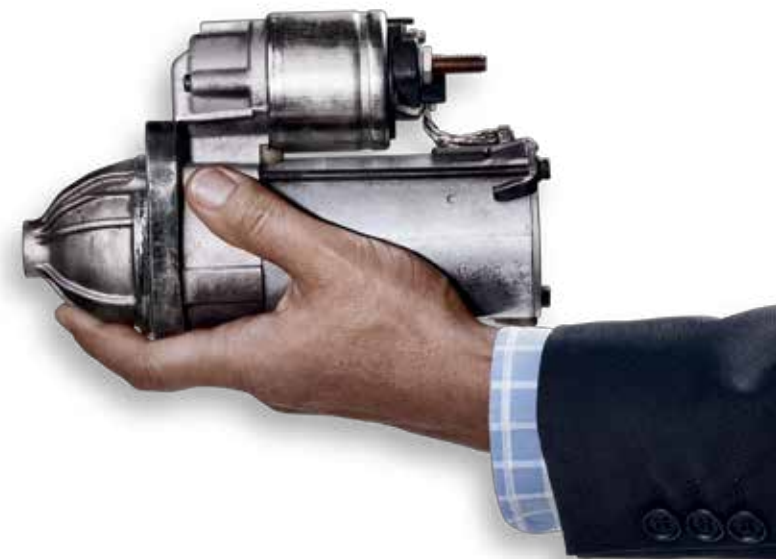

# that pays off immediately.

The product range for Mercedes-Benz Genuine Remanufactured Parts covers high volume models in the 4 - 10 year range and includes:

- Water pumps
- Starter motors
- Air conditioning compressors
- Alternators
- Hydraulic units
- Engines
- Transmissions
- Rear axle differentials
- Clutches
- Injectors
- Cylinder heads
- Control units

Additional products are planned and these will be communicated in due course.

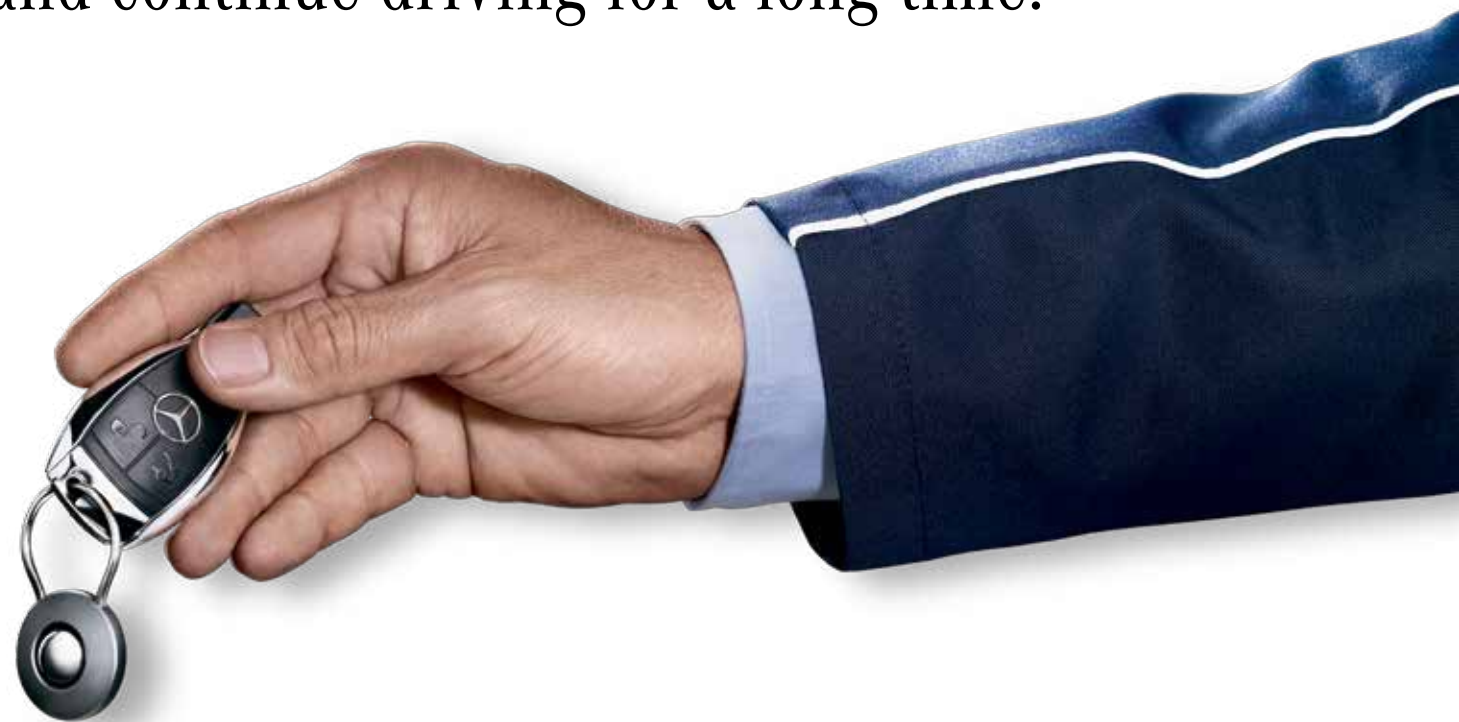

# Make an exchange...

Your Mercedes-Benz was built for the road, not to satisfy the service people. Nonetheless, should you have to call on us, Mercedes-Benz Genuine Remanufactured Parts have been specially developed particularly to suit vehicles of older model series. As you can see, we do everything to put you back on the road quickly.

# and continue driving for a long time.

# Remanufactured is just as good as new.

The remanufacturing process for Mercedes-Benz Genuine Remanufactured Parts.

All used parts have to go through several stages of a strict remanufacturing process before being approved as Mercedes-Benz Genuine Remanufactured Parts.

**Mercedes-Benz remanufacturing process based on the example of a Mercedes-Benz Genuine Remanufactured Engine:**

## 1. Disassembly

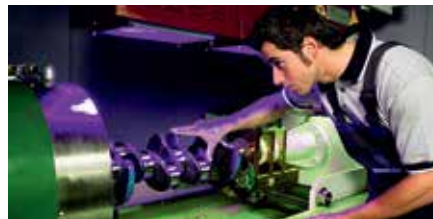

As a first step, the used engine is disassembled into its individual components.

## 2. Cleaning

The oil and dirt are then removed from all parts during an intensive cleaning process. Heavily soiled and corroded parts are subjected to further cleaning using various blasting processes (shot blasting, wet blasting).

## 3. Inspection and replacement

Even the smallest part is either visually inspected or function tested so that any damage can be quickly identified.

## 4. Remanufacturing

All the reusable components are professionally remanufactured and therefore comply fully with the manufacturer's specification.

## 5. Assembly

All of the checked parts are then put together in accordance with series production requirements to create a complete, fully functional Mercedes-Benz Genuine Remanufactured Engine. Quality-related modifications are automatically incorporated into the engine assembly.

## 6. Quality control

On the series production test benches, the Mercedes-Benz Genuine Remanufactured Engines are subjected to exactly the same function tests based on the same test criteria as new Mercedes-Benz Genuine Engines.
